SOUTH PARKS ROAD, OXFORD OX1 3RE

HENRY HARRIS
PROFESSOR OF PATHOLOGY

TELEPHONE OXFORD 57321
TELEGRAMS PATHOLOGY - OXFORD

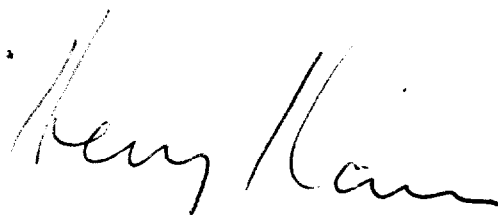

10th November 1971.

Dear Dr. Lederberg,

I have just read your piece about cell fusion in
Science Year 1972. I thought you might like to read the en-
closed reprint concerning the analysis of malignancy. I do
not think the picture is nearly as obscure as your reading of
it would seem to suggest. Indeed further analysis, which has
not yet been published, makes it quite clear that the genetic
lesions responsible for progressive growth in vivo are specific
defects regularly complementable by normal chromosomes.
We are busy mapping them.

Kindest regards,

Yours,

Dr. J. Lederberg,
Professor & Chairman of the
Department of Genetics,
Stanford University Medical School,
Palo Alto,
California.
U.S.A.

* Which I enjoyed very much!
